

TOPBUXUS® BOXWOOD RESTORE & PROTECT MIX

Instructions

Spray leaf fertilizer (8-0-10). A water-soluble nutrient tablet. 1 tablet covers 100 sqft of boxwood.

3 EASY STEPS

STEP 1: MEASURE

Calculate your boxwood coverage area. For each 100 sqft area, measure 1 quart of water. Add water to your pump sprayer.

STEP 2: MIX

Place tablet(s) into pump sprayer. Wait 10 minutes for tablet(s) to dissolve. Mix it up.

STEP 3: SPRAY

Spray fertilizer solution on your boxwood from top to bottom.

PRODUCT & USAGE TIPS

COVERAGE AREA:

Minimum product rate is 1 tablet to 1 quart of water covering 100 sqft of boxwood or approx. (3) Boxwood that are 3'L x 3'W round. The tablet can not be split down to mix a smaller amount of fertilizer solution.

WHEN TO APPLY:

Monthly, during your growing season

HOW TO APPLY:

For best results, the temperature range should be between the low 60°F to mid 80°F. Spray in the morning if the days are warm. If you spray the leaves when the temperature is above 85°F, you risk burning the boxwood leaves.

Spray the fertilizer solution on mostly dry boxwood leaves and spray enough so the plant is wet, but not dripping. Allow up to 3 hours of drying time. Can be sprayed after pruning boxwood.

CAN BE USED WITH OTHER PRODUCTS:

Use in conjunction with **TOPBUXUS® BOXWOOD TURBO GROW**. Together they provide a complete nutrient system your boxwood crave. You can use pest control products too.

STORAGE:

Keep unopened tablets in container in a dry environment and out of direct sunlight. Once tablet has been mixed with water, the fertilizer solution can keep for up to 3 weeks. Before use, stir or shake fertilizer solution.

DISPOSAL:

Disposal of contents and container in accordance with all local and national regulations.

GARDENING SAFETY:

We recommend you always wear gloves and protective eyewear when gardening.
